

NAVY TRAINING SYSTEM PLAN

FOR THE

MSU 200NAV

AIR START UNIT

N78-NTSP-A-50-0123/D

APRIL 2002

Enclosure (1)

MSU 200NAV AIR START UNIT

EXECUTIVE SUMMARY

This Navy Training System Plan has been developed to identify the manpower, personnel, and training requirements to support the MSU 200NAV Air Start Unit. The MSU 200NAV is a Commercial Operations and Support Savings Initiative program in the System Development and Demonstration Phase of the Defense Acquisition System. The MSU 200NAV is currently undergoing Technical Evaluation and Supportability Evaluation for use in the United States Navy and United States Marine Corps. This testing is planned to be completed in August 2002.

The MSU 200NAV will provide a source of compressed air primarily to power aircraft air turbine starters for aircraft engine starting. It will also be used to accomplish other aircraft maintenance and servicing functions, such as engine motoring, powering environmental control systems, and testing Ram Air Turbines. It will replace all Gas Turbine Compressor Air Start Units currently in use at Navy and Marine Corps activities beginning with the Gas Turbine Compressor (GTC)-85 Air Start Units. The unit will be mounted to an A/M 32U-16 Trailer for shore-based use and an A/S 32A-31A Tow Tractor for shipboard use.

Maintenance will be performed by Navy and Marine Corps personnel under the three level maintenance concept (organizational, intermediate, and depot) outlined in the Naval Aviation Maintenance Program, OPNAVINST 4790.2 series. The depot level maintenance activity is planned to be the Original Equipment Manufacture (OEM), Hamilton Sundstrand located in San Diego, California.

No change to the existing organizational or intermediate level maintenance activity billet structure is anticipated to support the operation and maintenance of the MSU 200NAV system. Based on a task and skill analysis of the predecessor system, the skills necessary to operate and maintain the MSU 200NAV system will be the same as those required for the existing GTC-85 Air Start Unit. Operators will be personnel of all Navy aviation maintenance ratings and Marine Corps aviation maintenance personnel. Maintainers will be from the Aviation Support Equipment Technician rating holding Navy Enlisted Classification code 7606 and Marine Corps Military Occupational Specialty 6072.

MSU 200NAV operators will be trained at local Aircraft Intermediate Maintenance Departments in pre-operational and post-operational inspections, unit operation, and general servicing. Intermediate level maintainers in Work Center 940 will receive en-route training on the MSU 200NAV at either of two locations, Maintenance Training Unit (MTU) 3032 Naval Air Maintenance Training Unit (NAMTRAU) Jacksonville, Florida, or MTU 3033 NAMTRAU North Island, California. Personnel currently assigned to Fleet activities will receive initial MSU 200NAV training from Naval Air Technical Data and Engineering Service Command (NATEC) representatives upon installation of the units at their site.

MSU 200NAV AIR START UNIT

MSU 200NAV AIR START UNIT

PREFACE

This Draft NTSP for the MSU 200NAV Air Start Unit is the first iteration and is in compliance with guidelines set forth in the Navy Training Requirements Documentation Manual, OPNAV Publication P-751-1-9-97.

PART I - TECHNICAL PROGRAM DATA

A. NOMENCLATURE-TITLE-PROGRAM

1. Nomenclature-Title-Acronym. MSU 200NAV Air Start Unit

2. Program Element. Program funding and contract award will occur in December 2002. At that time the Program Element will be identified.

B. SECURITY CLASSIFICATION

1. System Characteristics Unclassified

2. Capabilities Unclassified

3. Functions..... Unclassified

C. MANPOWER, PERSONNEL, AND TRAINING PRINCIPALS

OPNAV Principal Official (OPO) Program Sponsor..... CNO (N781B)

Director of Naval Training CNO (N795)

Commander, Reserve Program ManagerCOMNAVAIRESFOR CNO (N0955F)

Marine Corps Force Structure.....MCCDC (C53)

D. SYSTEM DESCRIPTION

1. Operational Uses. The MSU 200NAV Air Start Unit will provide a source of compressed air for powering Air Turbine Starters (ATS) and Constant Speed Drive Systems (CSDS) for aircraft engine starting and motoring both in and out of airframe (i.e., aircraft and engine test systems support). The MSU 200NAV will also power aircraft Environmental Control Systems (ECS) and Nozzle Rotation Systems (AV-8B). The MSU 200NAV will be used by Navy and Marine Corps personnel aboard aircraft carriers, at Naval Air Stations (NAS), and Marine Corps Air Stations (MCAS).

The MSU 200NAV will be mounted on the A/S 32A-31A Tow Tractor for shipboard use and mounted to an A/M 32U-16 trailer for shore based use and shipboard test cell support. An Engineering Change Proposal (ECP) is planned for development in Fiscal Year (FY) 03 to modify the A/S 32A-31A Tow Tractor and A/M 32U-16 Trailer for mounting the MSU 200NAV. When ECP information becomes available it will be included in updates to this NTSP.

2. Foreign Military Sales. The Royal Danish Air Force has also procured the MSU 200. Detailed information on Foreign Military Sales can be obtained from the Program Office, Program Manager, Air (PMA) 260.

E. DEVELOPMENTAL TEST AND OPERATIONAL TEST. The MSU 200NAV is a Commercial Operations and Support Savings Initiative (COSSI) program in the System Development and Demonstration Phase of the Defense Acquisition System. The MSU 200NAV is currently undergoing Technical Evaluation and Supportability Evaluation for the United States Navy and United States Marine Corps. This testing is planned to be completed in August 2002. More than 150 Commercial Off- The-Shelf MSU 200 units have been delivered since 1996 to more than 24 commercial airlines and airport authorities around the world, including Saudi Arabia and the Royal Danish Air Force.

F. AIRCRAFT AND/OR EQUIPMENT/SYSTEM/SUBSYSTEM REPLACED. The MSU 200NAV will replace all Gas Turbine Compressor Air Start Units currently in use at Navy and Marine Corps activities beginning with the Gas Turbine Compressor (GTC-85) Air Start Units.

G. DESCRIPTION OF NEW DEVELOPMENT

1. Functional Description. The MSU 200NAV is comprised of a small gas turbine engine housed in an aluminum enclosure. The engine provides compressed air at 56 pounds per square inch absolute (psia) and 204 pounds per minute (ppm) with a performance of 396 horsepower at zero bleed air and nominal speed of 46130 RPM. The bleed air temperature is +420 degrees Fahrenheit with an operating temperature range of -40 to +135 degrees Fahrenheit. The MSU 200NAV uses JP-4 and JP-5 fuel and has a fuel consumption rate of approximately 37.4 U.S. gallons per hour from either the Trailer or Tow Tractor fuel tanks, but is electrically

self-sufficient. The engine uses an electronic control system and the entire unit is Electromagnetic Interference (EMI) and Electromagnetic Vulnerability (EMV) hardened.

Combustion air for the gas turbine enters the compressor compartment via the inlet grill and cools the components in the compartment. The air then serves as a working medium in the turbine or is used as bleed air to be delivered to the aircraft. Through the effect of the ejector in the exhaust mixer, the turbine exhaust gas creates a negative pressure in the turbine compartment. Cold air to ventilate the compartment enters through the intakes at the front of the unit. This design of the enclosure allows for full utilization of the turbine performance by minimizing installation losses in the air inlet and exhaust system, as well as minimizing the heating of compressor intake air.

2. Physical Description. The MSU 200NAV contain a gas turbine engine, an enclosure to house all applicable components and protect the equipment from the environment, and adapter assemblies for tractor or trailer mounting. The unit will be readily installed using common support equipment and hand tools. The tractor adapter assembly will mount the unit to the rear face of the A/S 32A-31A Tow Tractor utilizing an L-frame platform. The trailer adapter assembly will mount the unit to the A/M 32U-16 Trailer. Neither the tractor nor the trailer is an integral part of the unit. The dimensions of the MSU 200NAV Module without carrying platform is 27.35 inches in height, 36.61 inches in width, and 68.31 inches in length. The module unit's weight without fuel is 950 pounds. A 30-foot flexible air start hose assembly will be supplied as a component of the unit.

The enclosure will have doors to protect the operator controls from the environment. It will provide easy access for fluid level checks, adjustment, replacement of engine and engine accessories, and other major maintenance. The enclosure is made of aluminum. The top of the enclosure will be designed to withstand the action of throwing the air start hose on it. The air start hose has a total weight of 95 pounds and the aircraft connector end weights 17 pounds.

3. New Development Introduction. The MSU 200NAV system will be introduced as a new production and will be retrofitted on approximately 499 tractors and trailers from FY03 through FY06.

4. Significant Interfaces. The MSU 200NAV will be capable of interfacing with the following systems:

- Tractor engine, fuel, and electrical system
- Trailer fuel system
- Aircraft engine starter horn coupling

5. New Features, Configurations, or Material. Start-up and operation of the unit are controlled and monitored by the Full Authority Digital Engine Control (FADEC) control panel.

H. CONCEPTS

1. Operational Concept. The MSU 200NAV will be operated by Navy and Marine Corps aviation maintenance personnel at the organizational level.

2. Maintenance Concept. Maintenance will be performed by Navy and Marine Corps aviation maintenance personnel under the three level (organizational, intermediate, and depot) maintenance concept outlined in the Naval Aviation Maintenance Program (NAMP), OPNAVINST 4790.2 series. The specific maintenance concept requirements and allocations as they apply to this program are as follows.

a. Organizational

(1) Preventive Maintenance. The MSU 200NAV will be operated at the squadron level. Preventive Maintenance (PM) is limited to pre-operational and post-operational inspections, cleaning, lubrication, and servicing checks for fuel and oil in accordance with the Maintenance Requirement Cards (MRC).

(2) Corrective Maintenance. No Corrective Maintenance (CM) is performed at the organizational level.

b. Intermediate

(1) Preventive Maintenance. PM consists of pre-operational and post-operational inspections, corrosion inspections and control, cleaning, lubrication, and servicing checks for fuel and oil in accordance with the MRCs.

(2) Corrective Maintenance. CM consists of troubleshooting, unscheduled repair by component removal and replacement as required to return the unit to service, and verifying repair. Intermediate maintenance will be performed by personnel in the Support Equipment Division (Work Center 940).

c. Depot. Depot level maintenance will consist of repairs beyond the capability of the Intermediate Maintenance Activity or condemnation in accordance with the Navy Source Maintenance and Recoverability (SM&R) Codes.

d. Interim Maintenance. Interim depot level maintenance will be provided by the contractor, Hamilton Sundstrand located in San Diego, California, in cooperation with Rheinmetall Landsysteme GmbH, located in Falckensteiner Strasse, Kiel, Germany.

e. Life Cycle Maintenance Plan. The maintenance plan is detailed in the MSU 200NAV Maintenance Plan Number M-LI-2002-7.

3. Manning Concept. No change to the existing organizational or intermediate level maintenance activity billet structure is anticipated. Based on a task and skills analysis of the predecessor system, the skills necessary to operate and maintain the MSU 200NAV system will be

basically the same as those of the existing GTC-85 equipment. MSU 200NAV operators will be provided by the organizational level activities using the unit, and maintainers will be provided by the intermediate level activities that have custody of the unit. Operators will be personnel of all Navy aviation maintenance ratings and Marine Corps aviation maintenance personnel. Maintainers will be of the Aviation Support Equipment Technician (AS) rating with Navy Enlisted Classification (NEC) code 7606 and Marine Corps Military Occupational Specialty (MOS) 6072.

4. Training Concept. As with other support equipment, operators will require licenses. As a prerequisite for the license, MSU 200NAV operators will be trained at local Aircraft Intermediate Maintenance Departments (AIMD) and Marine Aviation Logistics Squadrons (MALS) in pre-operational and post-operational inspections, unit operation, and general servicing. This training will be Phase I of the two-phase Support Equipment Training Program. Phase II training will be administered by the operator's command via the Managed On-the-Job Training (MOJT) process.

Intermediate level maintainers in Work Center 940 will require training on the MSU 200NAV at either Maintenance Training Unit (MTU) 3032 Naval Air Maintenance Training Unit (NAMTRAU) Jacksonville, Florida, or MTU 3033 NAMTRAU North Island, California.

Naval Air Technical Data and Engineering Service Command (NATEC) representatives will provide the initial training for onboard personnel as the MSU 200NAV is received at that site. Upon site activation, the NATEC representatives will train Navy AS and Marine Corps MOS 6072 personnel in the operation and maintenance of the MSU 200NAV.

Most NECs are potentially awarded to Selected Reserve (SELRES) personnel. However, given an individual's current and previous experience, it is not always feasible for SELRES personnel to be awarded an NEC that entails a long training period. Normally, a SELRES billet for a particular NEC that requires a long training period is filled by personnel who were awarded that NEC while on active duty or are willing to attend the required courses, given that a quota and funding are available.

For SELRES personnel to be awarded an NEC, each person's current skills, knowledge, and previous training is evaluated on an individual basis by the Commander, Naval Air Reserve Force and the MTU. In some cases, additional training is required.

Selected Reserve personnel may earn intermediate level maintenance qualifications by attending formal training at NAMTRAU, providing quotas, funding, and students are available to attend the training. Specific guidelines are contained in NAVPERS 18068F Volume II, Chapter IV, Navy Enlisted Classifications.

The established training concept for most aviation maintenance training divides "A" School courses into two or more segments called *Core* and *Strand*. Many organizational level "C" School courses are also divided into separate *Initial* and *Career* training courses. "A" School *Core* courses include general knowledge and skills training for the particular rating, while "A" School *Strand* courses focus on the more specialized training requirements for that rating and a

specific aircraft or equipment, based on the student's fleet activity destination. *Strand* training immediately follows *Core* training and is part of the "A" School. Upon completion of *Core* and *Strand* "A" Schools, Navy graduates going to organizational level activities attend the appropriate *Initial* "C" School for additional specific training. *Initial* "C" School training is intended for students in paygrades E-4 and below. *Career* "C" School training is provided to organizational level personnel, E-5 and above, to enhance skills and knowledge within their field. "A" School graduates going to intermediate level activities attend the appropriate intermediate level "C" School.

Marine Corps graduates of *Core* and *Strand* "A" school attend the appropriate *Career* "C" School for additional training on a specific type of aircraft or equipment, and to enhance skills and knowledge within their field. Marine Corps graduates from "C" School receive their primary MOS.

Intermediate level "C" Schools are not separated into *Initial* and *Career* courses.

a. Initial Training. Initial training in operation and maintenance for Developmental Test (DT) personnel was completed in FY01. Initial training for NAMTRAU Instructors is planned for October 2002. NATEC will provide initial training for shipboard Operational Test (OT) personnel in operation and maintenance upon installation and delivery until formal training is available. The operation and maintenance course will be presented to NATEC representatives, and validated and verified with in December 2003.

Title	MSU 200NAV Air Start Unit Engine and Enclosure Intermediate Maintenance
Description	This initial training will familiarize Naval and Marine Corps operators and maintenance personnel with the major differences between the MSU 200NAV and the systems it is replacing. Upon completion, the students will be able to perform operation and maintenance tasks to support DT.
Location	Government facilities
Length	3 days (estimated)
RFT date	Currently planned for October 2002
TTE/TD.....	MSU 200NAV
Prerequisites	° AS 7606 ° MOS 6072

Title	MSU 200NAV Air Start Unit Engine and Enclosure Intermediate Maintenance
Description	This initial training will familiarize NATEC representatives with the major differences between the MSU 200NAV and the systems it is replacing. Upon completion, the students will be able to perform NATEC support to the fleet.
Location	Government facilities
Length	3 days (estimated)
RFT date	Currently planned for December 2003
TTE/TD.....	MSU 200NAV
Prerequisites	NATEC Representative

b. Follow-on Training. A new intermediate level maintenance training course will be established for the MSU 200NAV. The new course, *C-602-3XXX, MSU 200NAV Engine and Enclosure Intermediate Maintenance*, will be included in the following training tracks:

- *D/E-602-7005, Support Equipment Gas Turbine Intermediate Maintenance*
- *D/E-602-7040, Support Equipment Engine/Gas Turbine and Related Systems Intermediate Maintenance*

Upon fleet introduction, the MSU 200NAV maintenance course, *C-602-3XXX, MSU 200NAV Engine and Enclosure Intermediate Maintenance*, will replace the GTC-85 course *C-602-3211A* in training tracks *D/E 602-7005* and *D/E 602-7040*. The GTC-85 course will remain active as a stand-alone course for 24 months while the GTC-85s are retired from service. The Ready For Training (RFT) date for *C-602-3XXX, MSU 200NAV Engine and Enclosure Intermediate Maintenance*, is planned for June 2004.

Title **Support Equipment Engine/Gas Turbine and Related Systems Intermediate Maintenance Course**

CIN D/E-602-7040

Model Manager ... MTU 3032 NAMTRAU Jacksonville

Description This track provides training to the Marine Corps Aviation Support Equipment Technician and includes the following Gas Turbine Compressor Air Start Unit engine and enclosure topics:

- ° Theory
- ° Operation
- ° System Analysis
- ° Testing and Troubleshooting
- ° Repair Procedures

Upon completion the student will be able to perform intermediate level maintenance on Gas Turbine Compressor Air Start Unit engines and enclosures in a shop environment under limited supervision.

Locations..... ° MTU 3032 NAMTRAU Jacksonville
° MTU 3033 NAMTRAU North Island

Length 107 days

RFT date ° Currently available without MSU 200NAV
° RFT with MSU 200NAV incorporated: June 2004

Skill identifier..... MOS 6072

TTE/TD..... GTC-85-72, GTCP 100-82

Prerequisite..... C-602-2026, Aviation Support Equipment Technician Class A1

c. Student Profiles

SKILL IDENTIFIER	PREREQUISITE SKILL AND KNOWLEDGE REQUIREMENTS
AS 7606	° C-602-2026, Aviation Support Equipment Technician Class A1
MOS 6072	° C-602-2026, Aviation Support Equipment Technician Class A1

d. Training Pipelines. The new course, *C-602-3XXX, MSU 200NAV Engine and Enclosure Intermediate Maintenance*, will not increase the length of training tracks *D/E 602-7005* or *D/E 602-4070*, nor will it affect any other training tracks.

I. ONBOARD (IN-SERVICE) TRAINING

1. Proficiency or Other Training Organic to the New Development

a. Maintenance Training Improvement Program. Current planning is to adopt the Aviation Maintenance Training Continuum System (AMTCS) concepts to replace Maintenance Training Improvement Program (MTIP). AMTCS is scheduled to begin full implementation for fleet deployment in FY03.

b. Aviation Maintenance Training Continuum System. AMTCS will provide career path training to the Sailor or Marine from their initial service entry to the end of their military career. AMTCS concepts will provide an integrated system that will satisfy the training and administrative requirements of both the individual and the organization. The benefits will be manifested in the increased effectiveness of the technicians and the increased efficiencies of the management of the training business process. Where appropriate, capitalizing on technological advances and integrating systems and processes can provide the right amount of training at the right time, thus meeting the Chief of Naval Operations' (CNO) mandated "just-in-time" training approach.

Technology investments enable the development of several state-of-the-art training and administrative tools: Interactive Multimedia Instruction (IMI) for the technicians in the Fleet in the form of Interactive Courseware (ICW) with Computer-Managed Instruction (CMI) and Computer-Aided Instruction (CAI) for the schoolhouse.

Included in the AMTCS development effort is the Aviation Maintenance Training Continuum System - Software Module, which provides testing [Test and Evaluation], recording [Electronic Certification Qualification Records], and a Feedback system. The core functionality of these AMTCS tools are based and designed around the actual maintenance-related tasks the technicians perform, and the tasks are stored and maintained in a Master Task List data bank. These tools are procured and fielded with appropriate Commercial-Off-The-Shelf (COTS) hardware and software, i.e., Fleet Training Devices - Laptops, PCs, Electronic Classrooms, Learning Resource Centers (LRC), operating software, and network software and hardware.

Upon receipt of direction from OPNAV (N789H), AMTCS concepts are to be implemented and the new tools integrated into the daily training environment of all, participating aviation activities and supporting elements. AMTCS will serve as the standard training system for aviation maintenance training within the Navy and Marine Corps, and is planned to supersede the existing MTIP and Maintenance Training Management and Evaluation Program (MATMEP) programs.

2. Personnel Qualification Standards. Not Applicable (NA)

3. Other Onboard or In-Service Training Packages. Marine Corps onboard training is based on the current series of MCO P4790.12, Individual Training Standards System and Maintenance Training Management and Evaluation Program (MATMEP). This program is designed to meet Marine Corps, as well as Navy OPNAVINST 4790.2 series, maintenance training requirements. It is a performance-based, standardized, level-progressive, documentable, training management and evaluation program. It identifies and prioritizes task inventories by MOS through a front-end analysis process that identifies task, skill, and knowledge requirements of each MOS. MTIP questions coupled to MATMEP tasks will help identify training deficiencies that can be enhanced with refresher training. (MATMEP is planned to be replaced by AMTCS.)

J. LOGISTICS SUPPORT

1. Manufacturer and Contract Numbers

CONTRACT NUMBER	MANUFACTURER	ADDRESS
Developmental Contract: N68335-00-9-0339	Hamilton Sundstrand United Technologies Company	P.O. Box 85757 4400 Ruffin Road San Diego, CA 92186-5757

Note: Follow-on Production Contract award is scheduled for December 2002.

2. Program Documentation. The User Logistics Support Summary (ULSS) is currently planned for approval and delivery in August 2003.

3. Technical Data Plan. The Technical Manual for the MSU 200NAV is currently being rewritten to a standard Navy Work Package format and is planned for completion in September 2002.

4. Test Sets, Tools, and Test Equipment. There are no requirements for special tools or test sets to support the MSU 200NAV.

5. Repair Parts. The requirements for spares and repair parts have not yet been determined. When these requirements are identified they will be included in updates to this NTSP. The Material Support Date for the MSU 200NAV is currently planned for November 2005.

6. Human Systems Integration. NA

K. SCHEDULES

1. Installation and Delivery Schedules. Installation and delivery schedules are to be determined. When delivery information becomes available it will be included in updates to this NTSP. The currently planned procurement for the MSU 200NAV is for a total of 499 units with the following schedule. The currently planned total of 499 units may increase in the future.

	FY03	FY04	FY05	FY06	FY07
Units	49	120	120	120	50

2. Ready For Operational Use Schedule. The actual delivery dates for individual sites has not yet been determined. The MSU 200NAV will be considered ready for operational use upon completion of installation. Installation is scheduled to begin in FY03 and be completed in FY07.

3. Time Required to Install at Operational Sites. The time required to install each MSU 200NAV on an L-frame assembly and mount it to the A/S 32A-31A Tow Tractor is estimated at 1.5 hours. The mounting of each MSU 200NAV on the A/M 32U-16 Trailer is estimated at 0.5 hours. Receiving activities will be required to mount the MSU 200NAV.

4. Foreign Military Sales and Other Source Delivery Schedule. NA

5. Training Device and Technical Training Equipment Delivery Schedule

ACTIVITY	TTE REQUIRED	DATE REQUIRED	READY FOR TRAINING
MTU 3032 NAMTRAU Jacksonville	MSU 200NAV: One shore-based One shipboard	December 2003	June 2004
MTU 3033 NAMTRAU North Island	MSU 200NAV: One shore-based One shipboard	December 2003	June 2004

PART III - TRAINING REQUIREMENTS

The following elements are not affected by the MSU 200NAV and, therefore, are not included in Part III of this NTSP:

II.A.2. Follow-on Training

III.A.2.b. Planned Courses

III.A.2.c. Unique Courses

III.A.3. Existing Training Phased Out

Note: A new intermediate level maintenance training course will be established for the MSU 200NAV. The new course, *C-602-3XXX, MSU 200NAV Engine and Enclosure Intermediate Maintenance Course*, will be included in the following training tracks:

- ° D/E-602-7005, Support Equipment Gas Turbine Intermediate Maintenance
- ° D/E-602-7040, Support Equipment Engine/Gas Turbine and Related Systems Intermediate Maintenance

Upon fleet introduction, the MSU 200NAV maintenance course, C-602-3XXX, will replace the GTC-85 course C-602-3211A in training tracks D/E 602-7005 and D/E 602-7040. The GTC-85 course will remain active as a stand-alone course for 24 months while the GTC-85s are retired from service. The RFT date for the new MSU 200NAV intermediate level maintenance training course is planned for June 2004.

PART III - TRAINING REQUIREMENTS

III.A.1. INITIAL TRAINING REQUIREMENTS

IV.A.2. TRAINING DEVICES

DEVICE: Engine GTC 85-72 (Cutaway)
DESCRIPTION: This item is a GTC-85-72 engine disassembled. It is used as show and tell of internal components in the classroom. (This is not a Cutaway).

MANUFACTURER: P/N 376880A
CONTRACT NUMBER: Unknown
TEE STATUS: Not Required

TRAINING ACTIVITY: MTU 3032 NAMTRAU
LOCATION, UIC : NAS Jacksonville, 39469

QTY REQD	DATE REQD	RFT DATE	STATUS	COURSES SUPPORTED
1	Jun 89	Jun 89	Onboard	C-602-3211 (Track D-602-7005 and D-602-7040)

TRAINING ACTIVITY: MTU 3033 NAMTRAU
LOCATION, UIC : NAS North Island, 39476

QTY REQD	DATE REQD	RFT DATE	STATUS	COURSES SUPPORTED
1	Jun 89	Jun 89	Onboard	C-602-3211 (Track E-602-7005 and E-602-7040)

DEVICE: Engine, GTCP-100-82 Cutaway
DESCRIPTION: The GTCP-100-82 Cutaway is the complete Gas Turbine Engine with sections cut out of its enclosure to reveal the internal components of the unit. The cutaway identifies with color code the air flow, fuel flow, and oil flow passages through the engine. This model is used to demonstrate the internal function of the engine and accessories to the student.

MANUFACTURER: Local

IV.A.2. TRAINING DEVICES

DEVICE: Engine MSU 200NAV (Cutaway)

DESCRIPTION: This is planned to be a model mock-up of the complete MSU 200NAV Gas Turbine Engine with sections cut out of its enclosure to reveal the internal components of the unit. The cutaway will identify with color code the air flow, fuel flow, and oil flow passages through the engine. This model will be used to demonstrate the internal function of the engine and accessories to the student.

Note: A viable alternative to the cutaway model would be to use a three dimensional, computer aided graphic that dissects the engine and shows the various flow circuits through the engine. This method of instruction is currently being used in various courses throughout Naval aviation maintenance training. Graphics created for use in NAMTRA courses must meet standards specified in AMTCS Conventions and Standards in accordance with the Navy Training System Plan N88-NTSP-A-50-9907/D of June 2001.
